📌 What is Netlify?

Netlify is a powerful all-in-one platform for deploying and managing modern web projects.
From hosting static websites to serverless functions, it's designed for **speed, simplicity, and scalability.**

🚀 Why Developers Love Netlify:

✅ One-click deployment for React, Vue, Svelte, and static sites
✅ Built-in CI/CD – push to GitHub → auto-deploy
✅ FREE tier with custom domain + SSL
✅ Handles form submissions without a backend
✅ Supports serverless functions (Edge + Lambda)
✅ Instant rollbacks and preview deployments
✅ Works great with headless CMS and Jamstack sites

🛠️ Who Should Use It?

- Frontend Developers

- JAMstack Builders

- Portfolio Creators

- Devs learning CI/CD & modern workflows

- Teams collaborating on static and dynamic apps

🔍 Key Concepts You'll Encounter:

- Static Site Hosting

- Git-integrated Deployments

- Environment Variables

- Serverless Functions

- Edge Functions

- Build Hooks

- Redirects and Rewrites

🧠 Pro Tips:

✅ Start small (a simple HTML/CSS site or React project)
✅ Connect with GitHub for CI/CD
✅ Explore Netlify Add-ons (forms, auth, analytics, etc.)
✅ Check Netlify Docs for deeper use cases
